

CORNERTM SHOT

- Corner Shot is a high-tech weapon system that enables military, law enforcement and security operators to effectively observe and engage targets from around the corner / behind a cover without exposing any parts of the operator's body.
- Corner Shot was designed for armed government & state organizations (military forces, law enforcement agencies & security services).
- Corner Shot can change the course of events by providing operators with an effective tool they can easily employ to pinpoint and accurately engage targets, at minimum risk to their personal safety.
- Corner Shot may be modified to accept most handgun types currently in use, such as the GLOCK, SIG SAUER, CZ, BERETTA or any other handgun.
- Corner Shot includes a small, high-resolution video camera and monitor, through which the operator can view targets located "around the corner" in real time. The detachable video camera enables the operator to scan the space around the corner or "in the next room" prior to pinpointing and engaging the targets therein.
- Corner Shot is effective to 100 meters and over with 9mm, 0.40" and 0.45" caliber pistols and up to 200 meters with 5.7 mm (FN P90) and 4.6 mm (HK) caliber pistols.

CORNERTM SHOT

**makes tight corners
an advantageTM**
